

Dr John M Marriott is Principal Statistician at the Royal Statistical Society Centre for Statistical Education in Nottingham Trent University. He has been an active lecturer, researcher and consultant for over 30 years and has taught statistics programmes to both specialists and non-specialists at undergraduate and postgraduate level. His consultancy has been across a wide range of industry and commerce and has included the Aerospace industry, medical insurance and statistical advice to an auditing company.

Dr Marriott obtained a BSc in Mathematics at the University of Sussex, an MSc in Statistics at the London School of Economics and Political Science and a PhD in Statistics at the University of Nottingham. His research interests are primarily in the Bayesian analysis of economic time series and model choice. He has been an invited researcher at the University of Connecticut, Queensland University of Technology and the University of Sydney.
